From Academic Year 2015 -16

Under

# **FACULTY OF TECHNOLOGY**

(As per Semester Based Credit and Grading System)

#### From Dean's Desk:

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that, each Board of Studies shall prepare some Program Educational Objectives (PEO's) and give freedom to affiliated Institutes to add few (PEO's) and course objectives and course outcomes to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, semester based credit and grading system is also introduced to ensure quality of engineering education.

Semester based Credit and grading system enables a much-required shift in focus from teacher-centric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes and Faculty of Technology has devised a transparent credit assignment policy and adopted ten points scale to grade learner's performance. Credit assignment for courses is based on 15 weeks teaching learning process, however content of courses is to be taught in 12-13 weeks and remaining 3-2 weeks to be utilized for revision, guest lectures, coverage of content beyond syllabus etc.

Credit and grading based system was implemented for First Year of Engineering from the academic year 2012-2013. Subsequently this system will be carried forward for Second Year Engineering in the academic year 2013-2014, for Third Year and Final Year Engineering in the academic years 2014-2015 and 2015-2016 respectively.

Dr. S. K. Ukarande
Dean,
Faculty of Technology,
Member - Management Council, Senate, Academic Council
University of Mumbai, Mumbai

#### **Preamble**

The engineering education in India in general is expanding in manifolds. Now, the challenge is to ensure its quality to the stakeholders along with the expansion. To meet this challenge, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education and reflects the fact that in achieving recognition, the institution or program of study is committed and open to external review to meet certain minimum specified standards. The major emphasis of this accreditation process is to measure the outcomes of the program that is being accredited. Program outcomes are essentially a range of skills and knowledge that a student will have at the time of graduation from the program. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

I, as Chairman, Board of Studies in Information Technology of University of Mumbai, happy to state here that, Program Educational Objectives were finalized in a meeting where more than 30 members from different Institutes were attended, who were either Heads or their representatives of Information Technology Department. The Program Educational Objectives finalized for undergraduate program in Information Technology are listed below;

- 1. To prepare Learner's with a sound foundation in the basics of engineering fundamentals.
- 2. To prepare Learner's to use effectively modern programming tools to solve real life problems.
- 3. To prepare Learner's for successful career in Indian and Multinational Organisations and to excel in Postgraduate studies
- 4. To encourage and motivate Learner's for entrepreneurship.
- 5. To inculcate professional and ethical attitude, good leadership qualities and commitment to social responsibilities in Learners.
- 6. To encourage Learner to use best practices and implement technologies to enhance information security and enable compliance, ensuring confidentiality, information integrity, and availability.

In addition to Program Educational Objectives, for each course of undergraduate program, objectives and expected outcomes from learner's point of view are also included in the curriculum to support the philosophy of outcome based education. I believe strongly that small step taken in right direction will definitely help in providing quality education to the stake holders.

#### Dr. J. W. Bakal

Chairman, Board of Studies in Information Technology,

# B.E. Engineering (Semester VII) Revised course for Information Technology

| BEITC701    | Software<br>Project<br>Management | 20                  | 20                 | 20                    | 80                  | 25           |           | 25   | 150   |  |  |  |

This course will help students to identify key areas of concern over Project Life Cycle (PLC) and use of project management principles across all the phases of PLC. The course will also help student to make them understand the importance and necessity of project plan and how it is helpful to project manager in monitoring and controlling the various aspects of the project such as schedule, budget, etc. The course will make them understand the importance of team and how to work as a team member, share best project management practices.

# **Course Outcomes:**

Upon completion of the course, students should be able to:

- Articulate similarities and differences between IT projects and other types of projects.
- Justify an IT project by establishing a business case
- Develop a project charter
- Develop a work breakdown structure for an IT project

- Estimate resources (time, cost, human being, etc.)
- Establish task inter-dependencies
- Construct and analyze a network diagram
- Identify IT project risks and develop risk mitigation strategies
- Ensure the quality of the project using various standards
- Demonstrate Team work and team spirit and how to overcome the conflicts

## **DETAILED SYLLABUS:**

| Sr.<br>No. | Module                                     | Detailed Content   | Hours |
|------------|--|--|-------|
| 1          | An overview of<br>IT Project<br>Management | Introduction, the state of IT project management, context of project management, need of project management, project goals, project life cycle and IT development, information technology project methodology (ITPM), project feasibility, request for proposal (RFP), the business case, project selection and approval, project contracting, PMBOK.  | 4     |
| 2          | Project<br>Integration<br>Management       | Introduction, project management process, project integration management, the project charter, project planning framework, the contents of a project plan, the planning process.   | 4     |
| 3          | Project Scope<br>Management                | Introduction, scope planning, project scope definition, project scope verification, scope change control, the Work Breakdown Structure (WBS), the linear responsibility chart.   | 4     |
| 4          | Project Time<br>Management                 | Introduction, developing the project schedule, Scheduling Charts, logic diagrams and network (AOA, AON), critical path, calendar scheduling and time based network, management schedule reserve, PDM network, PERT, CPM, Resource loading, resource leveling, allocating scarce resources to projects and several projects, Goldratt's critical chain. | 10    |
| 5          | Project Cost<br>Management                 | Cost estimating, Cost escalation, Cost estimating and system development cycle, Cost estimating process, Elements of budgets and estimates, Project cost accounting and MIS, Budgeting using cost accounts, Cost schedules and forecasts.  | 4     |

| 6  | <b>Project Quality</b> | Introduction, Quality tools and philosophies, quality     | 3 |
|----|------------------------|---|---|
|    | •                      |   | 3 |
|    | Management             | systems, the IT project quality plan.                     |   |
|    |                        |   |   |
| 7  | Project Human          | Introduction, organization and project planning, the      | 5 |
|    | Resource               | project team, multidisciplinary teams, the project        |   |
|    | Management             | environment, project leadership, ethics in projects,      |   |
|    |                        | multicultural projects, Role of project manager, IT       |   |
|    |                        | governance and the project office.                        |   |
|    |                        | Introduction to change, the nature of change, the change  |   |
|    |                        | management plan, dealing with resistance and conflicts.   |   |
| 8  | Project                | Introduction, monitoring and controlling the project, the | 4 |
|    | Communication          | project communications plan, project metric, project      |   |
|    | Management             | control, designing the control system, the plan-monitor-  |   |
|    |                        | control cycle, data collection and reporting, reporting   |   |
|    |                        | performance and progress, information distribution.       |   |
| 9  | Project Risk           | Basic concepts, Identification, Assessment, Response      | 4 |
|    | Management             | planning, Management.                                     |   |
| 10 | Project                | Introduction, project procurement management,             | 3 |
|    | Procurement            | outsourcing.  |   |
|    | Management             |   |   |
| 11 | The                    | Introduction, project implementation, administrative      | 3 |
|    | Implementation         | closure, project evaluation, project audit.               |   |
|    | Plan and Project       |   |   |
|    | Closure                |   |   |

#### Term work:

Term work shall consist of at least 10 experiments covering all topics of the syllabus. Distribution of marks for term work shall be as follows:

- 1. Attendance (Theory and Practical): 05 Marks
- 2. Laboratory work (Experiments and Journal): 15 Marks
- 3. Assignments: 5 Marks

The final certification and acceptance of TW ensures the satisfactory performance of laboratory Work and Minimum Passing in the term work.

# **Suggested Practical List:**

In practical, a group of maximum **three** students should be formed. Each group is supposed to complete all lab experiments (given below) on the case study given by the subject teacher. In lab experiments, students can used the tools like MsWord to prepare document whereas MsProject for preparing WBS, N/w diagram, PERT, CPM, performance analysis of the project, etc.

- 1. Project and System's Management
- 2. Feasibility study
- 3. Project Proposal
- 4. Project Planning
- 5. Activity Planning
- 6. Analyzing the project network diagram
- 7. Cost estimation and budgeting
- 8. Risk management
- 9. Performance analysis of project
- 10. Project evaluation and closure

#### **Theory Examination:**

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus.
- Remaining question will be randomly selected from all the modules.

This course will help the students to get familiar with cloud computing fundamentals, architecture, services, implementation and deployment techniques etc.

#### **Course Outcomes:**

After completion of the course the learner should be able to:

- 1. Differentiate different computing techniques.
- 2. Compare various cloud computing providers/ Software.
- 3. Handle Open Source Cloud Implementation and Administration.
- 4. Understand risks involved in cloud computing.

# **DETAILED SYLLABUS:**

| Sr.<br>No. | Module  | Detailed Content   | Hours |
|------------|---|--|-------|
| 1.         | Introduction to Cloud Computing                           | <ul> <li>Introduction – Component of CC – Comparing CC with Virtualization, Grids, Utility Computing, client-server model, P-to-P Computing – Impact of CC on Business – Key Drivers for Cloud Computing - Cloud computing Service delivery model</li> <li>Cloud Types – Private, Public and Hybrid, when to avoid public cloud, Cloud API</li> </ul>  | 2     |
| 2.         | Virtualization  | <ul> <li>Introduction &amp; benefit of Virtualization –         Implementation Levels of Virtualization- VMM         Deisgn Requirements and Providers – Virtualization         at OS level – Middleware support for Virtualization         – Virtualization structure/tools and mechanisms:         Hypervisor and Xen Architecture, Binary         Translation with full Virtualization, Para         Virtualization with Compiler Support –     </li> <li>Virtualization fo CPU, Memory and I/O Devices,         Hardware support for Virtualization in intel x86         processor – CPU Virtualization – Memory         Virtualization and I/O Virtualization – Virtualization         in Multicore processors</li> </ul> | 4     |
| 3.         | Cloud computing<br>Services                               | XaaS, IaaS, PaaS- Leveraging PaaS for Productivity-<br>Languages for PaaS- DBaaS(Database as a services) – SaaS<br>(Software as a service) – Comparison of various cloud<br>computing providers/ Softwares.  | 4     |
| 4.         | Cloud Computing<br>and Business Value                     | Key Business Drivers for CC- Cloud computing and out sourcing – Types of Scalability – Security issues in Cloud Computing- time to Market Benefits- Distribution over Internet – Three levels of Business value from Cloud computing.  | 4     |
| 5.         | Open Source Cloud<br>Implementation and<br>Administration | Eucalyptus and Open Stack Architecture Features – Components – Various mode of operations – Installation and configuration process of both open source – Cloud Administration and Management Task – Creating User Interface (Web Interface ) of Private cloud.   | 6     |

| 6. | Cloud Deployment<br>Techniques                   | Factors for Successful Cloud Deployment – Network Requirements – Potential Problem areas in a cloud Network and their Mitigation – Cloud Network Topologies – Automation and Self-service feature in a cloud –cloud performance.  | 4 |
|----|--|---|---|
| 7. | Security   | Security for Virtualization Platform – Host security for SaaS,<br>PaaS and IaaS – Data Security – Data Security Concerns –<br>Data Confidentiality and Encryption – Data Availability –<br>Data Integrity – Cloud Storage Gateways – Cloud Firewall   | 4 |
| 8. | Architecture for<br>Cloud Application            | Cloud Application requirements- Architecture for traditional Vs Cloud Applications- Multi-ties Application Architecture-SOA for Cloud applications – Resource oriented SOA – Method –oriented SOA and Event Driven SOA – Parallelization within Cloud Applications – Leveraging Inmemory Operations for Cloud Application                             | 4 |
| 9  | Cloud Programming                                | Programming Support for Google Apps engine: GFS, Big Tables, Googles NO SQL System, Chubby, Google Distibuted Lock Service,  Programming Support for Amazon EC2: Amazon S3, EBS and Simple DB etc.  | 4 |
| 10 | Adoption and Use of Cloud                        | Adoption of Public cloud by SMBs- Public Cloud Adoption phase for SMBs- Vendor liability and Management  Adoption process of Public clouds by Enterprises – Managed Private clouds  Migrating Application to the cloud – Impact of Shared Resources and Multi-Tenancy on cloud Applications – Phases during Migration an Application to An IaaS Cloud | 4 |
| 11 | Risks of Cloud<br>Computing and<br>Related Costs | Risk Assessment and Management – Rosk of Vendor Lock-<br>in – Risk of Loss of control over IT services- Risk of Poor<br>Provisioning – Risk of Multi-tenant environment – Risk<br>failure of cloud provider – SLA risk –security, malware and<br>Internet Attacks – Risk with Application Licensing.  | 2 |
| 12 | AAA<br>Administration for<br>Clouds              | AAA model – SSO for Clouds – Authentication management and Authorization management in clouds – Accounting for Resource utilization.  | 2 |

| 13 | Security as a service     | What can security as service offer- Benefits for Security as a service – Issues with Security as a Service- Identity Management as a Service | 2 |
|----|---------------------------|--|---|
| 14 | Mobile Cloud<br>Computing | Introduction, Defination, Architecture, Benefits, challenges in mobile and at cloud shield   | 2 |

#### **Text Books:**

- 5. Virtualization for Dummies, Wiley Publication

#### Term work:

#### **Suggested Practical List (If Any):**

- 1. Implementation of Private cloud using Eucalyptus or Open stake
  - Working with KVM to create VM
  - Installation and configuration of Private cloud
  - Bundling and uploading images on a cloud
  - Creating web based UI to launch VM
  - Working with Volumes Attached to the VM
- 2. Programming using Google Apps engine and Pythone

# **Theory Examination:**

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus.
- Remaining question will be randomly selected from all the modules.

- 1. To introduce the students' with different issues involved in trying to define and simulate intelligence.
- 2. To familiarize the students' with specific, well known Artificial Intelligence methods, algorithms and knowledge representation schemes.
- 3. To introduce students' different techniques which will help them build simple intelligent systems based on AI/IA concepts.

#### **Course Outcomes:**

- 1. Students will develop a basic understanding of the building blocks of AI as presented in terms of intelligent agents.
- 2. Students will be able to choose an appropriate problem-solving method and knowledge-representation scheme.
- 3. Students will develop an ability to analyze and formalize the problem (as a state space, graph, etc.) and select the appropriate search method.
- 4. Students will be able to develop/demonstrate/ build simple intelligent systems or classical toy problems using different AI techniques.

# **DETAILED SYLLABUS**

| Module | Detailed Content   | Hours |
|--------|--|-------|
| 1      | Introduction: Introduction to AI, AI Problems and AI techniques,   | 04    |
| •      | Solving problems by searching, Problem Formulation.  | 04    |
| 2      | Intelligent Agents: Structure of Intelligent agents, Types of Agents, Agent Environments PEAS representation for an Agent.   | 03    |
| 3      | Uninformed Search Techniques: DFS, BFS, Uniform cost search, Depth Limited Search, Iterative Deepening, Bidirectional search, Comparing Different Techniques.  | 04    |
| 4      | <b>Informed Search Methods</b> : Heuristic functions, Hill Climbing, Simulated Annealing, Best First Search, A*, IDA*, SMA*, Crypto-Arithmetic Problem, Backtracking for CSP, Performance Evaluation.          | 08    |
| 6      | <b>Adversarial Search:</b> Game Playing, Min-Max Search, Alpha Beta Pruning.   | 03    |
| 7      | <b>Knowledge and Reasoning:</b> A Knowledge Based Agent, WUMPUS WORLD Environment, Propositional Logic, First Order Predicate Logic, Forward and Backward Chaining, Resolution., Introduction to PROLOG.       | 08    |
| 8      | <b>Planning</b> : Introduction to Planning, Planning with State Space Search, Partial Ordered planning, Hierarchical Planning, Conditional Planning, Planning with Operators.                                  | 04    |
| 9      | Uncertain Knowledge and Reasoning: Uncertainly, Representing Knowledge in an Uncertain Domain, Conditional Probability, Joint Probability, Bays theorem, Belief Networks, Simple Inference in Belief Networks. | 06    |
| 10     | Learning: Learning from Observation, General Model of Learning Agents, Inductive Learning, Learning Decision Trees, Rote Learning, Learning by Advice, Learning in Problem Solving, Explanation based Learning | 05    |
| 11     | <b>Expert Systems:</b> Representing and using Domain Knowledge, Expert System-shell, Explanation, Knowledge Acquisition  | 03    |

## **Text Books:**

- **1.** Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, 2<sup>nd</sup> Edition, Pearson Education.
- **2.** Elaine Rich, Kevin Knight, Shivshankar B Nair, Artificial Intelligence, McGraw Hill, 3<sup>rd</sup> Edition.
- **3.** Elaine Rich, Kevin Knight, Artificial Intelligence, Tata McGraw Hill, 2<sup>nd</sup> Edition.

#### **Reference Books:**

- **1.** George Lugar, .AI-Structures and Strategies for Complex Problem Solving., 4/e, 2002, Pearson Education.
- 2. Nils J. Nilsson, Principles of Artificial Intelligence, Narosa Publication.
- **3.** Patrick H. Winston, Artificial Intelligence, 3rd edition, Pearson Education.
- **4.** Deepak Khemani, A First Course in Artificial Intelligence, McGraw Hill Publication

#### Term work:

Term Work shall consist of at least 8 practical and 2 assignments based on the list given below:

#### **Suggested Practical:**

- 1. Implementing Water jug problem using 1. BFS., 2. DFS (Un-Informed Search)
- 2. Implementing 8 puzzle problem with Heuristic function using Hill Climbing. (Informed Search)
- 3. Implementing 8 puzzle problem with Heuristic function Best First Search (Informed Search)
- 4. Implementing 8 Queen Problem with Heuristic function (Informed Search)
- 5. Implementing Tic-Tac-Toe problem to demonstrate Min Max and Alpha Beta Pruning. (Adversarial Search)
- 6. Implementing WUMPUS world problem. (Knowledge and Reasoning)
- 7. Introduction to PROLOG solving Basic problems like Factorial, Fibonacci series, Implementing User Defined String functions etc. (PROLOG)
- 8. Implementing Family Information System (PROLOG)
- 9. Implementing Mini Expert system. (PROLOG)

(Note: List of experiments is not limited with the above list , teacher can choose different set of experiments but care should be taken to explore variety of topics. )

Term Work: 25 Marks (total marks) = 15 Marks (Experiment) + 5 Marks (Assignment) + 5 Marks (Attendance (theory + practical))

**Oral examination** is to be conducted based on the complete syllabus.

# **Theory Examination:**

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. Total 4 questions need to be solved.
- 3. Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 3 marks will be asked.
- 4. Remaining question will be randomly selected from all the modules.

Get acquainted with modern wireless communication networks. Evolution of cellular networks, to understand basic framework of various protocols and standards used to develop wireless personal and wide area networks

#### **Course Outcomes:**

- 1. Understand the new trends in mobile/wireless communications networks
- 2. Understand the characteristics of mobile/wireless communication channels
- 3. Understand the multiple radio access techniques
- 4. Understand the multiuser detection techniques
- 5. Understand various wireless networks and their technologies
- 6. Understand need of securities and economies in wireless systems

# **DETAILED SYLLABUS:**

#### **Text Books:**

- 1. Modern wireless communication systems: by Simon Haykin, Michael Moher, adapted by David Koilpillai; Pearson (Indian edition 2011)
- 2. Wireless Networks: by Nicopolitidia, M S Obaidat, GI Papadimitriou; Wiley India (student edition 2010)
- 3. Wireless communications: by T L Singal; Tata McGraw Hill Education private Ltd.( edition 2011)

#### **References:**

- 1. Wireless and Mobile Networks: Dr. Sunilkumar S. Manvi & Mahabaleshwar S. Kakkasageri
- 2. Wireless Communications and Networking: by Vijay K. Garg
- 3. Wireless Communications: by Theodore S. Rappaport

**Term work:** Students are asked to perform lab sessions using Ns-2 Simulator and Matlab platform.

Assignments should be given based on syllabus.

#### **Theory Examination:**

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. Total 4 questions need to be solved.
- 3. Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 3 marks will be asked.
- 4. Remaining question will be randomly selected from all the modules.

**Course Pre-requisite:** As images are two dimensional signals, the single dimensional Digital Signal Processing fundamentals are part of the prerequisite study.

**Objective:** One picture is worth thousand words. A course in digital image processing teaches how such visual information can be used in various applications. This course will introduce the basic ideas and techniques used for processing images and their popular applications.

The objectives of this course are:

- To cover the basic theory and algorithms that are widely used in digital image processing,
- To expose students to current technologies and issues that are specific to image processing systems
- To develop skills in using computers to process images.

**Outcome:** Students should demonstrate the ability:

- To understand the fundamental concepts of a digital image processing system,
- To make extensive use of these concepts in implementing processing techniques such as noise removal, enhancement, compression for efficient storage and transmission, object extraction, representation and description for recognition or building computer vision, etc.

#### Term work:

At least 08 experiments covering entire syllabus must be performed during the semester and it should be presented in the practical record. Term work assessment must be based on the overall performance of the student with every practical graded from time to time. The grades should be converted into marks as per the Credit and Grading System manual and should be added and averaged. Due weightage should be given for the student's attendance.

#### **Internal Assessment (IA):**

Two tests must be conducted which should cover at least 80% of syllabus. The average marks of both the tests shall be considered as final IA marks

#### **Suggested Practical List:**

A minimum of 8 experiments from the suggested list must be performed. The DSP experiments (experiment 1 and 2) are the prerequisites.

- 1. Write a MATLAB program or C++ program for generating the following discrete time signals:
  - a. Exponential signal
  - b. Unit step and unit ramp signals
  - c. Sinusoidal signal
  - d. Composite signal with minimum 3 sinusoids added
- 2. Write a MATLAB program to demonstrate convolution and correlation operations with different examples of discrete time sequences.
- 3. Write a program for the following point processing operations and compare the results with MATLAB built in functions
  - a. Image negative
  - b. Gray level slicing with or without background
  - c. Power law transformations
  - d. Bit plane slicing
  - e. Histogram equalization
- 4. Write a program for image enhancement and compare the results with MATLAB built in functions.
  - a. Smoothing
  - b. Sharpening
  - c. High boost filtering
- 5. Write a program for image noise removal and analyze the results using,
  - a. Averaging
  - b. Median filter
- 6. Write a MATLAB program for 2D Discrete Fourier Transform and Inverse transform using built in functions.
- 7. Write a MATLAB PROGRAM for Transform domain processing using low pass and high pass filters and analyze the results for the following (any one):
  - a. Ideal filter
  - b. Butterworth filter
  - c. Gaussian filter
- 8. Write a MATLAB PROGRAM for edge detection in 2 directions and compare the results with built in functions for the following operators (any one):
  - a. Robert operator
  - b. Prewitt operator
  - c. Sobel operator
- 9. Write a MATLAB PROGRAM to compress the image using any one of the following lossless image compression techniques:
  - a. Huffman
  - b. RLE
  - c. LZW
- 10. Write a MATLAB PROGRAM to compress the image using any one of the following

lossy image compression techniques:

- a. JPEG
- b. IGS
- c. Predictive coding
- 11. Write a MATLAB PROGRAM to perform the following basic and derived morphological operations:
  - a. Dilation
  - b. Erosion
  - c. Opening
  - d. Closing
  - e. Boundary Detection
- 12. Write a MATLAB PROGRAM to represent / describe the image using any one of the following:
  - a. Chain code / shape number
  - b. Moments
  - c. Fourier descriptors
  - d. Euler number

#### **Theory Examination:**

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. Total 4 questions need to be solved.
- 3. Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 3 marks will be asked.
- 4. Remaining question will be randomly selected from all the modules.

- To provide students with a strong foundation in developing large, practical software-intensive applications.
- To train students with sound technical exposure to the concepts, principles, methods and best practices in software architecture.
- To develop the ability among students to learn the details of modeling techniques, design, implementation, deployment, and system adaptation.
- To enable students to choose the right tool for the job at hand and document design rationale.
- To prepare students to gain experiences with examples in design pattern application and case studies in software architecture.

#### **Course Outcomes:**

At the end of the course, students should be able to:

- 1. Argue the importance and role of software architecture.
- 2. Recognize major software architectural styles, design patterns, and frameworks.
- 3. Design software architecture for large scale software systems.
- 4. Describe various documentation approaches and architectural description languages.
- 5. Apply architectural patterns to quickly generate architectural alternatives and choose between them.

# **Prerequisites:**

This course builds on the study of Object Oriented Software Engineering. We assume fluency with Object Oriented Languages and UML

# **DETAILED SYLLABUS:**

#### **Text Books:**

- 1. Richard N. Taylor, Nenad Medvidovic, Eric M. Dashofy, "Software Architecture: Foundations, Theory, and Practice", Wiley Publications.
- 2. Len Bass, Paul Clements, Rick Kazman, "Software Architecture in Practice", Pearson

#### **References:**

1. M. Shaw, "Software Architecture Perspectives on an Emerging Discipline", Prentice Hall.

**Term work:** Term work should be based on the Lab experiments and assignments.

#### **Suggested Practical List:**

- 1. Modeling using xADL
- 2. Analysis Case study
- 3. Visualization using xADL
- 4. Integrate software components using a middleware
- 5. Use middleware to implement connectors
- 6. Wrapper to connect two applications with different architectures
- 7. Creating web service
- 8. Architecture for any specific domain

## **Theory Examination:**

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus.
- Remaining question will be randomly selected from all the modules.

- To understand technical aspect of E-commerce and E-Business
- To describe the process of E-commerce and E-business
- To understand Infrastructure design issues of E-commerce

#### **Course Outcomes:**

Graduates will be able to design and conduct experiments, as well as analyze and interpret the technological, user, network requirements for developing the various modules of e commerce/business site, will be able to apply the knowledge gained and modern engineering tools in their application domain.

## **Pre requisites:**

Internet Technologies, Database concepts, Internet Security, Middleware technologies, web services

# **DETAILED SYLLABUS:**

| Sr.<br>No. | Module  | Detailed Content  | Hours |  |  |  |  |
|------------|---|---|-------|--|--|--|--|
| 1          | E – commerce :-<br>Introduction to E<br>commerce  | Definition of e com , different types of e com ,<br>Examples of e com E commerce trade cycle ,<br>Advantages and disadvantages of ecom , Traditional<br>commerce Vs E commerce  | 2     |  |  |  |  |

#### **Text Books:**

- 1. E-Commerce Fundamentals and application (Henry Chan) Wiley publication
- 2. Electronics Commerce (Gary Schneider) Thomson Course technology
- 3. E Business , Parag Kulkarni , Sunita Jahirabadkar, Pradip Chande , Oxford Higher Education , Oxford University Press
- 4. E –business and E commerce Management , Dave Chaffey , Pearson ,  $3^{\rm rd}$  edition
- 5. E commerce by Laudon

#### **References:**

- 1. E- Commerce Strategies, Technology and applications (David Whitley) Tata McGrawHill
- 2. Introduction to E-commerce Elias Awad

#### Term work:

Term work should include at least 8 experiments.

Journal must include at least 2 assignments.

Term work: -25 marks (total) = 15 marks (experiments) + 5 marks (Assignments) + 5 marks (attendance – theory + Practical).

Oral exam will be based on the above syllabus.

#### **Suggested Practical List (If Any):**

# Exp 1: All experiments should be part of final e-commerce / e business portal development

- 1. Home page design
- 2. Form validation (Ajax enabled)
- 3. Catalog design and Search techniques (Web mining, and Ajax enabled)
- 4. Access control mechanism (session management)
- 5. Payment systems
- 6. Security features
- 7. Creating Web Site to integrate web Services
- 8. Server side using Web Services

Exp 2: Case study of M commerce, bit coins, Google app engine, and other current e com / e business technologies

### **Theory Examination:**

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. Total 4 questions need to be solved.
- 3. Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 3 marks will be asked.
- 4. Remaining question will be randomly selected from all the modules.

- To understand technical aspect of Multimedia Systems
- To understand and evaluate the process of development of Multimedia Systems
- To understand the framework and standards available for different Multimedia applications

#### **Course Outcomes:**

Students will be able to understand the relevance and underlying infrastructure of multimedia systems. The purpose of this course is to make the students capable to apply their multimedia knowledge to understand the current requirements of multimedia products. The standards and frameworks introduced will help the students develop the multimedia systems as per industry standards

## **Pre requisites:**

Interactive I/O devices, Networking, basic concepts communication devices, Standards & frameworks

| Sr.<br>No. | Module                                    | Detailed Content  | Hours |

### Term work:

Term work should include at least 8 experiments.

Journal must include at least 2 assignments.

Term work: -25 marks (total) = 15 marks (experiments) + 5 marks (Assignments) + 5 marks (attendance – theory + Practical).

# Oral exam will be based on the above syllabus.

### **Suggested Practical List (if any):**

- 1) Creating sample movies/ animations in flash.
- 2) Designing a multimedia application / multimedia authoring system.
- 3) Design a web application using dream viewer &fireworks
- 4) Construction of website using pictures, video, audio
- 5) Design a game application in flash
- 6) Record speech & perform compression & decompression
- 7) Case study on all file formats related to multimedia system
- 8) Case study on different authoring tools
- 9) Different levels of control in slide show presentation

### **Theory Examination:**

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. Total 4 questions need to be solved.
- 3. Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 3 marks will be asked.
- 4. Remaining question will be randomly selected from all the modules.

# **Course Objectives:**

Is to provide concrete advice and methods that can be systematically employed to ensure a high degree of usability in the final user interface.

# **Course Outcomes:**

Students will be able to create useful usable and used interface.

# **Course Objectives:**

- To introduce the ideas of ubiquitous computing techniques based on human experience.
- To generate an ability to design, analyze and perform experiments on real life problems using various smart devices, smart interaction and smart environment.
- To integrate computation into the environment, rather than having computers as distinct objects.
- To enable people to move around and interact with computers more naturally than they currently do.

### **Course Outcomes:**

On successful completion of this course the student has: Knowledge and understanding regarding:

- The objectives and the historical development of the field of ubiquitous computing
- Fundamentals of sensor technology and sensor networks
- Apply middleware techniques to implement ubiquitous computing systems
- Design of new (often embedded) interactive artifacts
- Context aware and adaptive systems
- Compare the usability of alternative design of interactions for specific ubiquitous computing systems

#### Term work:

Term work will be based on Practical and Assignments covering the topics of the syllabus.

### **Suggested Practical List (If Any):**

- 1. Applications for location-based messages
- 2. Global Positioning system
- 3. Context-Aware system
- 4. Human Computer Interaction
- 5. Ubiquitous Communication
- 6. Case study of Class Room 2020
- 7. Case study of Super Market
- 8. Case study of Hospital Management

## **Theory Examination:**

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus where in sub questions of 2 to 3 marks will be asked.
- Remaining question will be randomly selected from all the modules.

**Objective:** To help the learner to develop some of the following:

- 1. Relate theory with real time applications.
- 2. Experiencing the issues involved with creation and design of simple products and processes.

**Outcomes:** The learner should be able to prepare a synopsis of the work selected.

### **Guidelines for Project**

Students should do literature survey/visit industry/analyze current trends and identify the problem for Project and finalize in consultation with Guide/Supervisor. Students should use multiple literatures and understand the problem. Students should attempt solution to the problem by experimental/simulation methods. The solution to be validated with proper justification and compile the report in standard format.

# **Guidelines for Assessment of Project I**

- o Project I should be assessed based on following points
  - Quality of problem selected
  - Clarity of Problem definition and Feasibility of problem solution
  - Relevance to the specialization
  - Clarity of objective and scope
- o Project I should be assessed through a presentation by a panel of Internal and External examiners appointed by the University of Mumbai.

# **Course Objectives:**

- a. Study and evaluate the need for Storage networking, current storage technologies: SAN, NAS, IP storage etc., which will bridge the gap between the emerging trends in industry and academics.
- b. Understanding and building Storage networks and its backup and recovery techniques.
- c. Study the information retrieval system as per different application in storage networks.

### **Course Outcomes:**

- 1) Students will be able to evaluate storage architectures, including storage subsystems, SAN, NAS, and IP-SAN, also define backup, recovery.
- 2) Examine emerging technologies including IP-SAN.
- 3) Define information retrieval in storage network and identify different storage virtualization technologies.

Prerequisite: Computer Networks, Database Management Systems and Operating Systems

# **Course Objectives:**

- 1. To provide an overview of an exciting growing field of big data analytics.
- 2. To introduce the tools required to manage and analyze big data like Hadoop, NoSql Map-Reduce.
- 3. To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.
- 4. To enable students to have skills that will help them to solve complex real-world problems in for decision support.

### Course Outcomes: At the end of this course a student will be able to:

- 1. Understand the key issues in big data management and its associated applications in intelligent business and scientific computing.
- 2. Acquire fundamental enabling techniques and scalable algorithms like Hadoop, Map Reduce and NO SQL in big data analytics.
- 3. Interpret business models and scientific computing paradigms, and apply software tools for big data analytics.
- **4.** Achieve adequate perspectives of big data analytics in various applications like recommender systems, social media applications etc.

#### **Oral Exam:**

An oral exam will be held based on the above syllabus.

#### Term work:

Assign a case study for group of 2/3 students and each group to perform the following experiments on their case-study; Each group should perform the exercises on a large dataset created by them.

Term work: (15 marks for programming exercises + 10 marks for mini-project)

**Suggested Practical List:** Students will perform at least 8 programming exercises and implement one mini-project. The students can work in groups of 2/3.

- 1. Study of Hadoop ecosystem
- 2. 2 programming exercises on Hadoop
- 3. 2 programming exercises in No SQL
- 4. Implementing simple algorithms in Map- Reduce (3) Matrix multiplication, Aggregates, joins, sorting, searching etc.
- 5. Implementing any one Frequent Itemset algorithm using Map-Reduce
- 6. Implementing any one Clustering algorithm using Map-Reduce
- 7. Implementing any one data streaming algorithm using Map-Reduce
- 8. Mini Project: One real life large data application to be implemented (Use standard Datasets available on the web)
  - a) Twitter data analysis
  - b) Fraud Detection
  - c) Text Mining etc.

#### **Theory Examination:**

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus where in sub questions of 2 to 3 marks will be asked.
- Remaining question will be randomly selected from all the modules.

### **Course Objectives:**

This course presents an introduction to discrete event simulation systems. Emphasis of the course will be on modeling and the use of simulation languages/software to solve real world problems in the manufacturing as well as services sectors. The course discusses the modeling techniques of entities, queues, resources and entity transfers in discrete event environment. The course will teach the students the necessary skills to formulate and build valid models, implement the model, perform simulation analysis of the system and analyze results properly.

The "theory" of simulation involves probability and statistics, thus a good background in probability and statistics is a required prerequisite

### **Course Outcomes:**

- Understand the meaning of simulation and its importance in business, science, engineering, industry and services
- Identify the common applications of discrete-event system simulation.
- Practice formulation and modeling skills.

- Understand simulation languages
- Ability to analyze events and inter-arrival time, arrival process, queuing strategies, resources and disposal of entities
- An ability to perform a simulation using spreadsheets as well as simulation language/package
- Ability to generate pseudorandom numbers using the Linear Congruential Method
- Ability to perform statistical tests to measure the quality of a pseudorandom number generator
- Ability to define random variate generators for finite random variables
- Ability to analyze and fit the collected data to different distributions

#### Term work:

Laboratory work: 10 marks

Mini Simulation Project presentation: 10 marks

Attendance / Quiz: 5 marks

### **Suggested Practical List (If Any):**

Perform simulation exercises given in the text book (third edition) using spreadsheets and/or simulation language/package

- Queue- single server, multi-server, classic case- dump truck
- Inventory Lead time=0, lead time fixed, lead time probabilistic
- Reliability problem
- Tutorials on statistical models
- Random number generate and test
- Goodness of fit test
- Output analysis Point estimate and Confidence Interval

Simulation: Real World Examples – can be in the field of business, transportation, medical, computing, manufacturing and material handling- Presentation to be taken.

## **Theory Examination:**

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus where in sub questions of 2 to 3 marks will be asked.
- Remaining question will be randomly selected from all the modules.

**Course Objectives**: This course presents an introduction to ERP and related technologies. The course discusses ERP Manufacturing Perspective and ERP modules. The course will teach the learners the ERP implementation lifecycle, emphasis on ERP benefits and introduces the ERP tools.

Course Outcomes: The learner will be familiar with ERP and related technologies like Business Processing Reengineering (BPR), Supply Chain Management (SCM), Customer Relationship Management(CRM), MIS - Management Information System, DSS - Decision Support System, EIS - Executive Information System etc. The learner should gain the knowledge on ERP tools and ERP benefits.

# **Course Objectives:**

- 1. To understand the concepts of sensor networks and study the architecture of WSN.
- 2. To understand applications of WSN.
- 3. To discuss the challenges in designing MAC and routing protocols for wireless sensor networks.
- 4. To study different operating systems and look at performance issues.
- 5. To understand WSN Standards and future trends in WSN.
- 5. To study Challenges of Security in Wireless Sensor Networks and Protocols and Mechanisms for Security.

# **Course Outcomes:**

- 1. Students shall be able to understand and study the functionalities, applications and architecture of WSN.
- 2. Students shall be able to describe the challenges in designing various protocols for wireless sensor networks.

- 3. Students shall be able to understand the current technology trends for the implementation and deployment of wireless sensor networks.
- 4. Students shall gain an understanding of WSN Standards and future trends in WSN.
- 5. Students shall be able to understand security aspects like Privacy issues, attacks and countermeasures.

**Term work:** Term work shall consist of at least 06 experiments from the suggested list & 04 assignments based on the syllabus.

Distribution of marks for term work shall be as follows.

- 1. Attendance (Theory & Practical) :05 marks
- 2. Laboratory Work (Experiment & Journal):15 marks
- 3. Assignment: 05 marks.

The final certification and acceptance of Term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

### **Suggested Practical List:**

- 1. Installation of OMNET ++.
- 2. Installation & configuration of TinyOS.
- 3. Implementation of any two routing algorithms using JAVA
- 4. Implementation of any two programs on Tiny OS.
- 5. Study of any of the WSN operating systems.

### **Theory Examination:**

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus where in sub questions of 2 to 3 marks will be asked.
- Remaining question will be randomly selected from all the modules.

## **Course Objective:**

- To provide an understanding of the basic concepts and uses of GIS technology
- To develop an ability to analyze, interpret geospatial data
- To provide an understanding of the basic principles of Remote Sensing and its use in GIS
- To provide a research platform for students in the area of GIS adapting to ever changing Technologies

#### **Course Outcomes:**

After completing this course, students will be able to:

- Apply the knowledge of science for real world applications in GIS
- Design and conduct experiments as well as analyze, interpret the geospatial data using GIS tools
- Function with multidisciplinary Teams.
- Use the techniques, skills and modern engineering tools necessary for engineering practice.
- Adapt to Open source standards

| Module     | Unit No. | Details of Topic   | Hrs.       |
|------------|----------|--|------------|
| No.<br>1.0 |          | Fundamentals of GIS  | 06         |
| 1.0        | 1.1      | Introduction, Definition of GIS, Evolution of GIS, components of GIS,  | 00         |
|            | 1.2      | Geospatial Data, Geographic Coordinate System,<br>Map Projections, Commonly Used Map Projections, UTM<br>grid system, Map Scale  |            |
|            | 1.3      | Cartographic Symbolization, Types of Maps, Typography,<br>Map Design, Map Production   |            |
| 2.0        |          | Data Management, Models and Quality Issues   | 06         |
|            | 2.1      | Vector Model: Topology, Non topological Vector models,<br>Attribute Data in GIS, Attribute Data Entry, Vector Data<br>Query, Manipulation of Fields and Attribute Data                     |            |

### **Internal Assessment (IA):**

Two tests must be conducted which should cover at least 80% of the syllabus. The average marks of both the tests will be considered as final IA marks.

#### Term Work:

Term Work shall consist of at least 10 programs based on the above syllabus using any suitable software.

Distribution of marks for term work shall be as follows:

- 1. Attendance (Theory and Practical): 05 Marks
- 2. Laboratory work (Performing Experiments and Journal): 20 Marks

The final certification and acceptance of TW ensures the satisfactory performance of laboratory Work and Minimum Passing in the term work.

### **Theory Examination:**

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus where in sub questions of 2 to 3 marks will be asked.
- Remaining question will be randomly selected from all the modules.

**Course Objectives:** The Lerner is introduced to the fundamentals and kinematics of Robots. The topics like Differential motions & velocities, Trajectory Planning, Mobile Robot Motion Planning etc. are discussed.

Course Outcomes: At the end of this course, learners will be able to

- a. Understand kinematics and dynamics of stationary and mobile robots
- b. Understand trajectory planning for rigid robot and mobile robots
- c. Implement trajectory generation and path planning algorithms
- d. Work in interdisciplinary projects

# **Detailed Syllabus:**

| 1. Fundamentals                        | Robot Classification, Robot<br>Components, Degrees of freedom,<br>Joints, Coordinates, Coordinate<br>frames, workspace, applications  | 03 Hrs | Chapter 1 –<br>Text Book 1 |
|--|---|--------|----------------------------|
| 2. Kinematics of Robots                | Homogeneous transformation matrices, Inverse transformation matrices, Forward and inverse kinematic equations – position and orientation, Denavit-Hatenberg representation of forward kinematics, Inverse kinematic solutions, Case studies | 07 Hrs | Chapter 2 –<br>Text Book 1 |
| 3. Differential motions and velocities | Differential relationship, Jacobian,<br>Differential motion of a frame and<br>robot, Inverse Jacobian   | 06 Hrs | Chapter 3 –<br>Text Book 1 |
| 4. Dynamic Analysis of                 | Lagrangian mechanics, Moments of  | 07 Hrs | Chapter 4 –                |

| Forces   | Inertia, Dynamic equations of robots,<br>Transformation of forces and<br>moment between coordinate frames  |        | Text Book 1                    |

#### Term Work:

Term Work shall consist of at least 10 programs based on the above syllabus using any suitable software.

Distribution of marks for term work shall be as follows:

- 1. Attendance (Theory and Practical): 05 Marks
- 2. Laboratory work (Performing Experiments and Journal): 20 Marks

The final certification and acceptance of TW ensures the satisfactory performance of laboratory Work and Minimum Passing in the term work.

# **List of Experiments:**

Note: At least one experiment shall be performed from every group. Total number of experiments should be 10.

- 1. Forward kinematics of n-DOF robot arm Simulation (maximum 2 experiments)
- 2. Inverse Kinematics of n-DOF robot arm Simulation (maximum 2 experiments)
- 3. Dynamic modeling of n-DOF robot arm & Simulation (maximum 2 experiments)
- 4. Trajectory planning of n-DOF robot arm (maximum 2 experiments)
- 5. Simulation of Bug1, bug2 and tangent bug algorithms (maximum 3 experiments)
- 6. Simulation of Potential field, voronoi graph, and visibility graph methods (maximum 3 experiments)

## **Theory Examination:**

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus where in sub questions of 2 to 3 marks will be asked.
- Remaining question will be randomly selected from all the modules.

### **Course Objectives:**

**AIM:** To introduce the techniques and methodologies of soft computing and adaptive neuro-fuzzy inferencing systems which differ from conventional AI and computing in terms of its tolerance to imprecision and uncertainty.

- To introduce the ideas of soft computational techniques based on human experience.
- To generate an ability to design, analyze and perform experiments on real life problems using various Neural Learning Algorithms.
- To conceptualize fuzzy logic and its implementation for various real world applications.
- To apply the process of approximate reasoning using Neuro-Fuzzy Modeling.
- To provide the mathematical background to carry out optimization using genetic algorithms.

#### **Course Outcomes:**

Student should be able to mimic human like thought process on deterministic machines and apply it to different real world problems faced in the professional front.

| Sr.No. | Module                            | Detailed Content  | Hours |
|--------|-----------------------------------|---|-------|
| 1      | Introduction to Soft<br>Computing | Neural Networks: Definition, Advantages, Applications, Scope.  Fuzzy logic: Definition, Applications. Hybrid System: Definition, Types of Hybrid Systems, Applications. Genetic Algorithms: Definition, Applications.   | ,     |
| 2      | Neural Networks                   | Fundamental Concepts and Models of Artificial Neural Systems: Biological Neurons and Their Artificial Models, Models of Artificial Neural Networks, Neural Processing, Learning and Adaptation, Neural Network Learning Rules and Comparison. Linearly and Non-Linearly Separable Pattern Classification. Perceptron Convergence Theorem. Multi-layer Feedforward Network: Delta Learning Rule for Multiperceptron Layer, Generalized Delta Learning Rule, Feedforward Recall and Error Back-propagation Training, LearningFactors, CharacterRecognitionApplication.  Associative Memory: Hopfield Network, Bidirectional Associative Memory. Radial Basis Function Networks. |       |
| 3      | Fuzzy Set Theory                  | Brief Review of Conventional Set Theory, Introduction to Fuzzy Sets, Properties of Fuzzy Sets, Operations on Fuzzy Sets, Membership Functions. Fuzzy Extension Principle, Fuzzy Relations, Projection and Cylindrical Extension of Fuzzy Relations, Fuzzy Max-Min and Max-Product Composition. Fuzzy Knowledge Based Systems with Applications, Defuzzification Methods, Fuzzy Composition Rules, Architecture of Mamdani Type Fuzzy Control Systems.   | 16    |
| 4      | Hybrid Systems                    | <b>ANFIS</b> : Adaptive Neuro-Fuzzy Inference Systems: Introduction, ANFIS Architecture, and Hybrid Learning Algorithm.   | 4     |
| 5      | Genetic Algorithms                | What are Genetic Algorithms? Why Genetic Algorithms? Biological Background: The Cell, Chromosomes, Genetics, Reproduction, Neural Selection, Traditional Optimization and Search Techniques, Genetic Algorithm and Search space: Simple GA, General GA, Operators in GA, Encoding, Selection, Crossover, Mutation, Stopping Condition for GA flow, Constraints in GA, Problem solving using GA, Classification of GA.   | 6     |

#### Term work:

Term work will be based on Practical and Assignments covering the topics of the syllabus.

## **Suggested Practical List (If Any):**

- 1. Fuzzy membership function
- 2. Fuzzy Extension principle
- 3. Fuzzy controller
- 4. Perceptron Learning rule
- 5. Delta Learning Rule
- 6. Associative Memory
- 7. Genetic Algorithm
- 8. Competitive Learning

# **Theory Examination:**

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus where in sub questions of 2 to 3 marks will be asked.
- Remaining question will be randomly selected from all the modules.

Course Objectives: The students will learn

- I. Basic software debugging methods.
- II. White box and Black box testing methods
- III. Writing the testing plans
- IV. Different testing tools

### **Course Outcomes:**

# After completion of course the students will able to:

- 1: Identify the reasons for bugs and analyze the principles in software testing to prevent and remove bugs.
- 2: Implement various test processes for quality improvement
- **3:** Apply the software testing techniques in commercial environments
- **4:** Provides practical knowledge of a variety of ways to test software and an understanding of some of the trade-offs between testing techniques.
- **5:** Familiar with the open source testing tools.

| Sr.<br>No. | Module                             | Detailed Content   | Hours |
|------------|------------------------------------|--|-------|
|            | Unit-I Testing<br>Methodology      | Introduction, Goals of Software Testing, Software Testing Definitions, Model for Software Testing, Effective Software Testing vs Exhaustive Software Testing, Software Failure Case Studies, Software Testing Terminology, Software Testing Life Cycle (STLC), Software Testing methodology, Verification and Validation, Verification requirements, Verification of high level design, Verification of low level design, validation.  | 10    |
|            | Unit II Testing Techniques         | Dynamic Testing: Black Box testing: boundary value analysis, equivalence class testing, state table based testing, cause-effect graphing based testing, error guessing.  White box Testing Techniques: need, logic coverage criteria, basis path testing, graph matrices, loop testing, data flow testing, mutation testing. Static Testing.  Validation Activities: Unit validation, Integration, Function, System, Acceptance Testing.  Regression Testing: Progressive vs. Regressive, regression testing produces quality software, regression testability, objectives of regression testing, regression testing types, define problem, regression testing techniques. | 12    |
|            | Unit III Managing the Test Process | Test Management: test organization, structure and of testing group, test planning, detailed test design and test specification.  Software Metrics: need, definition and classification of software matrices.  Testing Metrics for Monitoring and Controlling the Testing Process: attributes and corresponding matrics, estimation model for testing effort, architectural design, information flow matrix used for testing, function point and test point   | 10    |

|     |  | analysis.  Efficient Test Suite Management: minimizing the test suite and its benefits, test suite minimization problem, test suite prioritization its type, techniques and measuring effectiveness.   |   |
|-----|--|--|---|
|     | it IV Test<br>tomation                   | Automation and Testing Tools: need, categorization, selection and cost in testing tool, guidelines for testing tools. Study of testing tools: WinRunner, QTP, LoadRunner, TestDirector and IBM Rational Functional Tester, Selenium etc.   | 8 |
| for | it V Testing<br>Specialized<br>vironment | Testing Object Oriented Software: OOT basics, Object-oriented testing.  Testing Web based Systems: Web based system, web technology evaluation, traditional software and web based software, challenges in testing for web based software, testing web based testing, Testing a data warehouse | 5 |
|     | it VI Quality<br>anagement               | Software Quality Management, McCall's quality factors and Criteria, ISO 9126 quality characteristics, ISO 9000:2000,software quality management  | 3 |

- 1. Software Testing Principles and Practices Naresh Chauhan Oxford Higher Education
- 2. Effective Methods for Software Testing , third edition by Willam E. Perry, Wiley Publication
- 3. Software Testing and quality assurance theory and practice by Kshirasagar Naik, Priyadarshi Tripathy , Wiley Publication
- 4. Software Testing Concepts and Tools by Nageswara Rao Pusuluri, dreamtech press

### **References:**

1. Foundation of Software Testing 2 e, by Aditya P. Mathur, Pearson publication

- 3. Software Testing Principles, techniques and tools by M.G. Limaye, Mc Graw Hill publication

#### Term work:

Term work will be based on Practical and Assignments covering the topics of the syllabus.

## **Suggested Practical List:**

- 1. Write programs in C Language to demonstrate the working of the following
- a. constructs: i) do...while ii) while....do iii) if...else iv)switch v) for
- 2. A program written in C language for Matrix Multiplication fails. Introspect the causes for its failure and write down the possible reasons for its failure.
- 3. Take any system (e.g. ATM system) and study its system specifications and report the various bugs.
- 4. Write the test cases for any known application (e.g. Banking application)
- 5. Create a test plan document for any application (e.g. Library Management System)
- 6. Design Test case using boundary value analysis by taking quadratic equation problem.
- 7. Design a test cases using equivalent class partitioning taking triangle problem
- 8. Study of any testing tool (e.g. Win runner)
- 9. Study of any web testing tool (e.g. Selenium)
- 10. Study of any test management tool (e.g. Test Director)
- 12. Study of any open source-testing tool (e.g. Test Link)

### **Theory Examination:**

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus where in sub questions of 2 to 3 marks will be asked.
- Remaining question will be randomly selected from all the modules.

| BEITP706    | Project I      |                     |        |                    |      | 50           |           | 50   | 100   |

# **Course Objectives:**

- 1. Implimentaion of the topic selected in Project-I.
- 2. Initiating the learners to technical writing and documentation for reuse.
- 3. Developing proficiency in carrying out critical analysis, review and study of existing literature on technological experimentation and finding out of scholastic investigation

**Outcomes:** The learner should be able to:

- 1. Demonstrate the product that is implemented.
- 2. Produce the proper documentation of the work.
- 3. Able to work in team and communicate with peers.
- 4. Develop skills required by the industry.

### **Guidelines for Project**

Students should do literature survey/visit industry/analyze current trends and identify the problem for Project and finalize in consultation with Guide/Supervisor. Students should use multiple literatures and understand the problem. Students should attempt solution to the problem by experimental/simulation methods. The solution to be validated with proper justification and compile the report in standard format.

# **Guidelines for Assessment of Project II**

- o Project II should be assessed based on following points
  - Quality of problem selected
  - Clarity of Problem definition and Feasibility of problem solution
  - Relevance to the specialization / Industrial trends
  - Clarity of objective and scope
  - Quality of work attempted
  - Validation of results
  - Ouality of Written and Oral Presentation
- o Report should be prepared as per the guidelines issued by the University of Mumbai.
- o Project II should be assessed through a presentation jointly by Internal and External Examiners approved by the University of Mumbai
- Students should be motivated to publish a paper based on the work in Conferences/students competitions
